Optoelectronics specialist MENTOR presents its innovative LED illumination concepts

Modular LED light panels and customized LED illumination

On this year's Light + Building the company is exhibiting an interesting selection of its LED product highlights in association with the LLFY Network: The studies of the uniquely modular light panel systems as well as customized developments of the M-TUBE LED light bars are shown as a real novelty on the exhibition. The globally acting group MENTOR is determining the market in regard to the development and manufacture of mechanical, electronic, opto-electronic precision components and sensor technology elements for the industry and auto industry suppliers – and that is by now for some 90 years.

On this year's Light + Building the development specialist is presenting its innovative new developments from the network competence areas electronics and optoelectronics within the framework of the LLFY exhibition stand (hall 4.1, stand D50). Among other things, MENTOR shows a study of its LED panel light systems that can be lined up in a modular way to seamlessly form bigger illumination fields thanks to the frameless construction. The panel lights are suitable for every conceivable application because of the extremely low construction height.

A further highlight on the exhibition stand are the tailor-made further developments of the M-TUBE light system, which is capable of homogeneously illuminating a light guide of up to two meters in length on the basis of just two LEDs feeding in their light from the side. Due to their narrow size and the homogeneous illumination the M-TUBEs are also integrated in the exhibition stand's light concept.

As one of the first associated partners of the LLFY Network MENTOR is translating technical know-how and power of innovation in tailor-made solutions. Customized products for the most diverse branches of industry and fields of application are created in this way. However, by now a multitude of developments specially made for customers have become part of the standard range of the company, which today comprises far more than 3,000 products.

MENTOR GmbH & Co. Präzisions-Bauteile KG
